1. INTRODUCTION TO SARAO

The South African Radio Astronomy Observatory (SARAO, formerly in part SKA SA) is the business unit of the National Research Foundation (NRF) that houses and operates South Africa's national radio telescope shared facilities, including the MeerKAT, KAT-7, and Hartbeeshoek 26-m radio telescopes.

As a member of the international effort to build the Square Kilometre Array (SKA), which will be the world's largest radio telescope, South Africa (through the NRF's business units) is responsible for the construction and operation of the MeerKAT precursor telescope, for hosting the SKA Mid Frequency telescope, and for implementation of the African VLBI Network.

The SARAO project office has offices based in Johannesburg and Cape Town, as well as the radio-quiet SKA host site in the Karoo, 90km from Carnarvon in the Northern Cape, which hosts the Square Kilometre Array mid-frequency telescopes, MeerKAT, and KAT-7 radio telescope installations, as well as a number of guest instruments, including the HERA telescope.

2. SUPPLY SPECIFICATIONS

SARAO invites the submission of quotations for the following:

Provision of a Signal Path Analyst who will deliver specialized technical services to SARAO in support of the on-going work on the SKA-Mid, MeerKAT and other projects. The projects run in parallel and the analyst will potentially work on multiple projects contemporaneously, providing the following services (as and when required):

- 1) Verification of signal path functionality and performance, through:
 - a) Performing signal path engineering in development of telescopes, telescope subsystems or radio astronomy instrumentation.
 - b) Analysing required signal path functionality and performance.
 - c) Performing high-level modelling and design of systems, algorithms and calibration procedures that comprise the signal path.
 - d) Assisting with implementation by allocating requirements to subsystem teams, or by transferring algorithms or calibration procedures.
 - e) Performing signal path integration and set-to-work, notably configuration of signal path settings and calibration models.
 - f) Defining and executing signal path verification tests, performing test data analysis and compiling reports thereon.
 - g) Analysing performance issues / non-compliances and optimising performance on existing systems.
- 2) Supporting Systems Engineering through signal path analysis, through:
 - a) Providing inputs to elements of the systems engineering process pertaining to the signal path.
 - b) Contributing to concept definition documentation by performing concept design analysis and trade-off studies.
 - c) Providing system-level requirements for signal path functionality and performance, as well as requirements allocated to subsystem levels.
 - d) Providing inputs to signal path architectural design.
 - e) Providing supporting analysis for engineering change requests.
 - f) Defining signal path aspects of integration and verification plans.
 - g) Assisting in execution of test plans and documentation of results in test reports.
- 3) Supporting user and science operations, through:
 - a) Contributing calibration procedure information, procedures to monitor signal path

performance, as well as troubleshooting procedures to operator manuals.

- b) Diagnosing issues relating to signal path performance as identified by operations, users or other stakeholders and assisting with addressing identified issues.
- c) Assessing product performance as part of troubleshooting, maintenance, minor upgrades or periodic performance benchmarking.

NOTE: These tasks are not necessarily listed in priority or order of execution: the Signal Path Analyst will take guidance from the SARAO Systems Engineer / Project Manager regarding priorities and order of execution (which may involve certain tasks being executed in parallel).

The working arrangement will be hybrid, i.e. the Signal Path Analyst will be expected to be present in-person at the SARAO offices (Liesbeek House, Mowbray, Cape Town) for periods of the contract duration but may also work remotely for periods as well. The timing and duration of these in-person and remote work phases will be negotiated on placement of the contract. While working at SARAO's offices, the workspace and data infrastructure will be provided by SARAO, however the Signal Path Analyst must provide their own computer. The workload will vary in intensity, but the maximum loading per month can be up to 150 hours and it is estimated that there is sufficient data available on the various tasks to potentially keep the Signal Path Analyst fully loaded at 120 hours per month for up to 6 months.

Due to close interaction with the SARAO team and the international product teams, the bidder needs to propose the services of a single, individual Signal Path Analyst for this role, for the duration of the contract. This person should be a specialist in the field of signal path analysis whose experience lies in signal path analysis for radio astronomy, radar or electronic warfare systems and products.

The Signal Path Analyst will provide a monthly timesheet that will be signed off by the SARAO Project Manager. The signed timesheet must accompany the invoices submitted.

A confidentiality agreement will be signed by all parties involved upon acceptance of the quotation by SARAO.

Key notes for bidders;

- The quoted project total costs must be all-inclusive, including any applicable disbursements.
- SARAO reserves the right to terminate the contract and use an alternative service provider if the required services are not met.
